DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 20 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,575,769 (Arnoldi).

Arnoldi discloses a method of exposing an image comprising: scanning successive exposure lines of said image along a first scanning direction (CCD sensor (column 3, lines 63-67)); and varying a resolution of each exposure line along a second scanning direction (step motor incremented by a sequence of varying step sizes in order to produce a varying scan resolution of each exposure along the direction of document travel (column 6, lines 40-65; Fig. 3)); said first scanning direction differing from said second scanning direction (direction of document travel orthogonal to horizontal scan line (Fig. 3)). Said first scanning direction defines a horizontal exposure of said image and said second scanning direction defines a vertical exposure of said image (horizontal scan line corresponds to first scanning direction defining horizontal exposure of image and direction of document travel corresponds to second direction defining vertical exposure (Fig. 3)).

Allowable Subject Matter

Claims 1-19 are allowed.

Application/Control Number: 10/658,601 Page 3

Art Unit: 2625

4. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to disclose or suggest the steps of "supplying each of a plurality of imaging beams with a respective data sequence comprising sections of successive input lines of a digital image, said successive input lines being exposed along a slow scanning direction defined by a horizontal resolution, and imaging at least one exposure line with a variable resolution along said fast scanning direction, wherein the size of said sections is determined by said variable resolution," as recited in base claim 1; and as similarly recited in base claims 5, 8, 12 and 18.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas D. Lee whose telephone number is (571) 272-7436. The examiner can normally be reached on Monday-Friday, 7:30-5:00, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David K. Moore can be reached on (571) 272-7437. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2625

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
